

CASE STUDY #100: NEENAH, WISCONSIN

Date of Project: May 15, 2023

Location: Neenah, Wisconsin

Type of Build: Apartment Complex

Contractor: Black Haak HVAC

Supplier Rep: Tradeline Sales

"Python is 25% faster to install than copper line sets. The three hundred foot lengths made the installation much easier!"
- Jeff Haak, Owner

The Challenges:

- Copper line sets likely to kink in multifamily units with a lot of bends.
- Copper would have meant more brazing and shorter runs.
- A large part of the installation required overhead work which would be difficult with heavier copper coils.

The Solutions:

- Python is my hero! Bent easily without kinking unlike copper line sets.
- Three hundred foot coils made for continuous runs with no brazing.
- Python is much lighter and easier to handle on jobs that require overhead installation.

The Benefits:

- No copper means that the tubing is less likely to be stolen from jobsites. Great for peace of mind!
- No brazing means a safer and more efficient install.
