

CASE STUDY #102: BRIGHAM CITY

Date of Project: May 9, 2024

Location: Brigham City, Utah

Type of Build: Refurbish

Contractor: Bingham Mechanical

Supplier Rep: Franklin James

"Loved how easy it was to handle, pull and bend. (I) couldn't be happier with how well the 3/4" bends!"

-Jared Bingham, owner

The Challenges:

- Multiple joists and exposure to sharp points while pulling.
- Concerns with safety due to on site brazing.
- Multiple turns and fittings if installed with copper.

The Solutions:

- Insulation is robust. It handled well pulling through joists and penetrations very well.
- Eliminating the need for brazing saves time, simplifies installation so more guys can be trusted to perform the task.
- Python's no braze fitting creates a safer work space.

The Benefits:

- Elimination of expensive copper waste.
- The no braze fitting streamlined the installation, eliminating additional fittings and leak points.
