

## CASE STUDY #103: WARTON, NJ

**Date of Project:** May 11, 2024

**Location:** Warton, New Jersey

**Type of Build:** Single Family

**Contractor:** Regional Heating

**Supplier Rep:** Altherm, Inc.

*"It's amazing, no brazing. I'll be using Python on my next install later this week!"*

*-Leo Murillo, owner*

### The Challenges:

- Difficult area to install with copper. Tight spaces and turns.
- Multiple overhead lines with heavy tubing.
- Copper install would require on-site torch use.

### The Solutions:

- Python pulled easier than copper and was easier to work with on the bends.
- Lighter tubing made for easier installation and less back breaking labor.
- No brazing on site with Python's no braze fitting.

### The Benefits:

- Very quick to install, plug and play!
- Zero challenges with Python Line Sets!
