CASE STUDY #112: GREENTREE TERRACE APARTMENTS

Completion: 2024
Location: Nashville, TN
Project Type: Residential
Application: Mini-Split
Contractor: Peters Heating & Air
Supplier Rep: Dexter Chambers / Carrier
Enterprises

*We really like that the line set comes as a 300ft roll.
This saves on the line set for copper in 25 or 50 ft.*

Very easy to use!

- Steve Teson

Challenges

- This job contained so many units on numerous floors and we were working in apartments that still had tenants.

Solutions

- Python pipe is incredibly lightweight and made for easier work taking it up and down multiple flights of stairs.
- Python is very easy to work with and makes for a quick install.
- Use of two wrenches to tighten correctly and the fittings are great

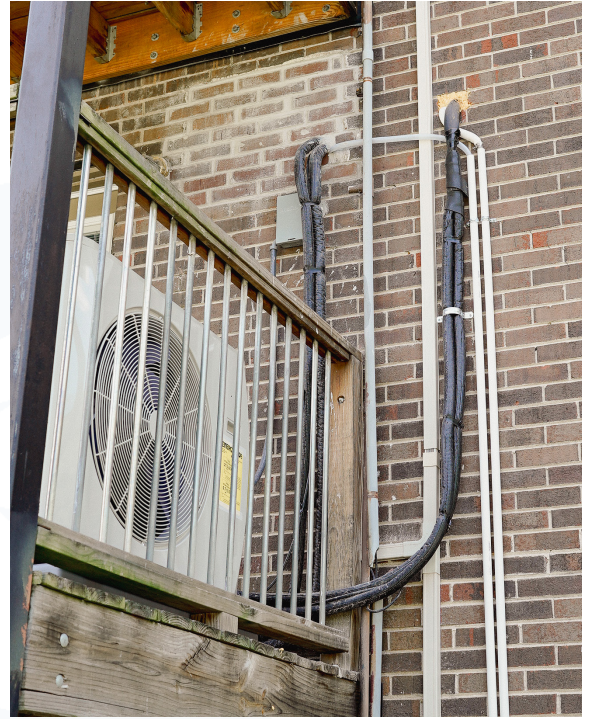

Benefits

- Saves on refrigerant copper with the 300ft rolls and its easy to fish in tight places with refrigerant lines.
- No gas or flame in tight places with the fittings.
