

## The Next Evolution of Line Sets.

### CASE STUDY #123: GREENFIELD, IA

Completion: 2024  
Location: Greenfield, IA  
Project Type: Residential  
Application: Mini-Split System  
Contractor: Advanced Problem Solutions  
Supplier: McDonald Supply

*"The install went great and we loved working with Python and its long coil lengths."  
- Advanced Problem Solutions*

#### Challenges

- Multiple runs feeding the multi-zone mini-split system.
- Long lines needed.

#### Solutions

- Python pipe came in a long 300' coil.
- Ft. markings on the pipe ensured we had proper lengths without making multiple measurements or cuts.

#### Benefits

- The line set length was 155', so we were very happy with Python's flexibility and coming in a large 300' roll with ft. markings on the pipe.
- Being able to direct bury it was another big plus.
